or call 307.684.5833

STEERING COMMITTEE MEMBERS

The TA Health Education Foundation and the Wyoming Department of Health, Behavioral Health Division gratefully acknowledge the contributions of the steering committee.

David Birney, Ph.D.

David Birney is the Executive Director of the Peak Wellness Center in Cheyenne Wyoming.. He is a two-time recipient of the Rocky Mountain Council of Community Mental Health Centers Distinguished Service Award and a member of the Partnership for the Resolution of Mental Health Issues in Wyoming.

Art Merrell, M.D.

Art Merrell is certified by the American Board of Psychiatry and Neurology, the American Society of Addiction Medicine, the American Board of Forensic Psychiatry and the American Society of Addiction Medicine. He currently serve as the Medical Director of the Peak Wellness Center as well as the Chief Medical Officer of the Wyoming Department of Health, Behavioral Health Division.

Shawn Powell, Ph.D., ABPP

Shawn Powell is a licensed psychologist. He is board certified in school psychology by the American Board of Professional Psychology. Shawn is the President-Elect of the American Academy of School Psychologists. He is a psychology faculty member at Casper College and is an adjunct faculty member of the University of Wyoming and the University of Northern Colorado.

Bert Toews, M.D.

Bert Toews is a full time addiction physician and founder of the Wyoming Recovery Program and medical director of the Wyoming Professional Assistance Program. Dr. Toews is certified by the American Board of Addiction Medicine and by the American Board of Family Medicine. Dr. Toews has taken a leading role in addressing Wyoming's substance use issues.

The Prescription Drug Abuse Stakeholder's Taskforce

As representatives of the health care community, law enforcement, government and community members, the Prescription Drug Abuse Stakeholders Taskforce devotes its efforts to eliminating the increasing abuse of prescription medications while ensuring that they remain available for patients in need. The Rx Stakeholder's Taskforce seeks to help doctors, nurses, pharmacists, other healthcare professionals, law enforcement and the general public become more aware of both the use and abuse of prescription medication. And we seek to improve the regulatory framework to ensure that prescription medications are available to the patients who need them while preventing these drugs from becoming a source of harm or abuse.

Wyoming is facing a very serious epidemic of uncontrolled substance use. What may seem like a practical drug that can relieve pain and stress also has a dangerous side that is not always realized. Patients do not have to be addicted in order to have their health impacted by a substance. The Center for Disease Control reported that from 2001 to 2005, alcohol was involved in thirty four percent of deaths from falling in the state of Wyoming. From emergency rooms to general practices or obstetric offices, less than addictive substance use creates major complications.

The Wyoming Department of Health, the Behavioral Health Division and the TA Health Education Foundation are determined to give practitioners tools designed to assist dedicated healthcare professionals. All sessions have been constructed specifically for Wyoming healthcare providers with guidance from a panel of Wyoming treatment professionals. This training addresses current challenges and developing issues that these experts believe will plague Wyoming in the future. The varied sessions are targeted to providers with different roles and responsibilities. Because the training is free, live, and 2-way video conference or web broadcast; multiple staff members can attend with minimal interruption to business. Our hope is that this training will provide attendees new and effective ideas in combating these problems throughout Wyoming.

ABOUT THE TRAINING

Attend the sessions that impact you, and interact in real-time with the speaker, your peers, and other experts. You don't need to attend every session; we've designed the training so that every mental healthcare constituent can find specific presentations to help meet Wyoming's mental health and substance abuse needs. This training is free and you can get one contact hour for each session you attend.

LOCATION

This program will take place February 21 – 22, 2012 live at the TA Guest Ranch in Buffalo. It will also be broadcast live, in a 2-way interactive format via the Wyoming Telehealth Network (see pg. 10 for broadcast locations). Participants can join the training at participating Hospitals throughout Wyoming, or on their personal computer through live web streaming.

THIS CONFERENCE IS SPECIFICALLY DESIGNED FOR PROFESSIONALS :

- Psychiatrists
- Psychologists
- General Practitioners
- ER Physicians
- Pediatricians
- Mental Health and Substance Abuse Counselors
- Physician's Assistants
- Nurses
- Pharmacists
- Dentists
- Preventionists

Tuesday, February 21

Time	Session	Credits Offered
8:00 – 9:30 am	Medication Assisted Therapies <i>Art Merrell, M.D. and Bert Toews, M.D., FASAM</i>	
9:45 – 11:45 am	Collaborative Practice to Promote Pain Management and Reduce Substance Abuse <i>David Brushwood, R.Ph., J.D.</i>	
1:00 – 2:00 pm	Substance Use Sensitive Prescribing <i>Bert Toews, M.D., FASAM</i>	
2:15 – 3:45 pm	Less Than Addictive Substance Use: The Case for Intervention <i>Larry Gentilello M.D., F.A.C.S.</i>	
4:00 – 5:00 pm	The Treatment of Mental Health and Substance Abuse: A Cross Disciplinary Discussion <i>David Brushwood, R.Ph, J.D., Dr. Gary Fisher, Ph.D., Larry Gentilello M.D., F.A.C.S., David R Hadlock, D.O., F.A.C.O.O.G., D.A.B.A.M., C.M.R.O., C.C.H.P., S.A.P., M.A.C., and Bert Toews, M.D., FASAM</i>	

Wednesday, February 22

Time	Session	Credits Offered
8:00 – 9:00 am	Issues in Ethics for Mental Health and Substance Abuse Treatment Providers <i>Dr. Gary Fisher, Ph.D.</i>	
9:15 am – 12:15 pm	Fetal Alcohol Spectrum Disorder <i>David R Hadlock, D.O., F.A.C.O.O.G., D.A.B.A.M., C.M.R.O., C.C.H.P., S.A.P., M.A.C.</i>	
12:30 – 1:30 pm	Substance Use Sensitive Prescribing <i>Bert Toews, M.D., FASAM</i>	
1:45 – 3:15 pm	Treating the Unique Needs of Wyoming Veterans <i>Mark Mann, M.D.</i>	

8:00-9:30**MEDICATION ASSISTED THERAPIES***Art Merrell, M.D.**Bert Toews, M.D., FASAM*

Numerous studies have demonstrated a significant decline in recidivism rates when behavioral therapy is accompanied by medications targeted at substance. This approach is otherwise known as medication assisted therapy. In this presentation, join Drs. Art Merrell and Berton Toews as they discuss the neurobiology of addiction, including a discussion of the theory that sluggish dopamine reward systems predispose individuals to addiction. Follow as substance abuse is defined and the differences between addiction and dependence and tolerance are discussed. They will explain the neurobiology of detoxification and explore the evidence regarding the efficacy of medications used to assist with the symptoms of withdrawal. Discover the medication available to assist in treating substance use such as Naltrexone, Buprenorphine, Tegretol, Chantix, Zyban, and more. Examine the evidence regarding recidivism and the use of these medications. Join them in the discussion regarding if these medications do or do not fit with abstinence or spirituality based recovery programs such as the twelve step model.

Art Merrell, M.D.: Dr. Merrell attended the University of Colorado Medical School, and completed a residency in psychiatry at the University of Colorado Psychiatric Hospital. Dr. Merrell is certified by the American Board of Psychiatry and Neurology with added qualification in addiction psychiatry. He is also certified through examination by the American Society of Addiction Medicine, the American Board of Forensic Psychiatry, and the American Board of Addiction Medicine. Dr. Merrell currently serves as the Medical Director of the Peak Wellness Center, the Chief Medical Officer of the Wyoming Department of Health, Behavioral Health Division. He also maintains a part time private practice in Cheyenne, Wyoming.

Berton Toews, M.D., FASAM: Berton Toews was born near Calgary, Alberta, grew up in Bonners Ferry, Idaho, and attended University of Idaho and University of Northern Colorado. He received his medical degree from the University of Cincinnati, and later moved to Casper, Wyoming in 1976. There he became the first graduate from the University of Wyoming family practice residency program. He is certified by the American Board of Addiction Medicine and by the American Board of Family Medicine, and is Wyoming's only full-time addiction physician. In 1996, Dr. Toews opened Wyoming Recovery Program, which is a multi-level addiction treatment center in Casper that plays a leading role in tackling the state's substance problems. He has also been active in helping health professionals impaired by addictions for more than twenty years and is medical director of Wyoming Professional Assistance Program. He is active on the admitting staff of Wyoming Medical Center and as faculty at the University of Wyoming family practice residency program. He is also a Senior Aviation Medical Examiner.

9:45-11:45**COLLABORATIVE PRACTICE TO PROMOTE PAIN MANAGEMENT AND REDUCE SUBSTANCE ABUSE***David Brushwood, R.Ph., J.D.*

Less than two decades ago, emergency rooms saw some 40,000 patients in one year who misused prescription pain killers. In 2008, over 300,000 were admitted for this wildly growing problem. One expert reported that about 5.2 of the estimated 7 million Americans who abuse prescription drugs were improperly using pain relievers. It's no wonder that prescribers hesitate to write prescriptions for pain medications. Some have resorted to refusing patients pain management drugs in fear of promoting or permitting the abuse of these drugs, but does this best serve patients in real pain? Join Dr. David Brushwood as he focuses on reducing substance abuse while still managing patient's pain. Dr. Brushwood describes how

collaboration between prescribers, patients and pharmacists can meet the needs of chronic pain patients without “knowingly” filling inappropriate prescriptions by following VIGIL (Verification, Identification, Generalization, Interpretation and Legalization). This presentation will clarify the challenging problem of distinguishing pain behaviors from suspect behaviors as well as clearly identifying addiction with the FSMB regulatory approach. Dr. Brushwood will demonstrate how to avoid prescription fraud with the help of information from the DEA Pharmacist Manual. A knowledgeable and trusted expert in the crucial education of pharmacist professional responsibility and pain management policy, Dr. David B. Brushwood, R.Ph., J.D. will be sure to deliver essential education on these increasingly important issues.

David B. Brushwood, R.Ph., J.D.: David Brushwood is Professor of Pharmaceutical Outcomes and Policy at the University of Florida College of Pharmacy in Gainesville. His primary teaching responsibilities are in the areas of pharmacist professional responsibility and pain management policy. Professor Brushwood has received grant funding from agencies such as the Community Pharmacy Foundation, the Robert Wood Johnson Foundation, and the National Institutes of Health. He currently directs an online Master of Science in Pharmacy program that he founded in 2006. The program has over 200 students actively pursuing graduate studies. Professor Brushwood is a frequent contributor to pharmacy journals and to law journals.

1:00–2:00

SUBSTANCE USE SENSITIVE PRESCRIBING

Bert Toews, M.D., FASAM

If a patient broke his leg in a car accident caused by substance use, should this information change how the prescriber treats the pain of the broken leg? Americans are showing a decreasing tolerance

for pain. In fact, prescriptions for pain relievers in 2003 were an astounding 16 times higher than in 1994. Unfortunately, these powerful tools for relieving pain carry the perilous potential of addiction. According to NIDA, as many as 7% of patients prescribed narcotic or opioids analgesics will become addicted. Furthermore, the Drug Enforcement Agency’s Office of Diversion and Control reports that 74% of American abusing prescription drugs are abusing pain relievers. Americans are abusing prescription drugs more than cocaine, hallucinogens, inhalants and heroin combined, but shockingly, 40 percent of physicians do not know their patient’s substance use background when prescribing these potentially addictive substances. In this session, addiction specialist Bert Toews will outline crucial steps prescribers can take to treat their patients while being sensitive to potential addiction. Dr. Toews will explain the vital importance of knowing a patient’s substance use history before prescribing. Drawing on his extensive experience in treating addiction, Dr. Toews will explain the use and effectiveness of pain contracts. Inspired by real life clinical situations, this session promises to deliver practical solutions for prescribers in every day practice.

Berton Toews, M.D., FASAM: Berton Toews was born near Calgary, Alberta, grew up in Bonners Ferry, Idaho, and attended University of Idaho and University of Northern Colorado. He received his medical degree from University of Cincinnati, and moved to Casper, Wyoming in 1976. There he became the first graduate from the University of Wyoming family practice residency program. He is certified by the American Board of Addiction Medicine and by the American Board of Family Medicine, and is Wyoming’s only full-time addiction physician. In 1996, Dr. Toews opened Wyoming Recovery Program, a multi-level addiction treatment center in Casper that plays a leading role in tackling the state’s substance problems. HE has also been active in helping health professions

impaired by addictions for more than twenty years and is medical director of Wyoming Professional Assistance Program. He is active on the admitting staff of Wyoming Medical Center, and as faculty at the University of Wyoming family practice residency program. He is also a Senior Aviation Medical Examiner.

2:15-3:45

LESS THAN ADDICTIVE SUBSTANCE USE: THE CASE FOR INTERVENTION

Larry Gentilello M.D., F.A.C.S.

It's well known that the abuse of drugs and alcohol leads to many problems. In 2004 alone, 3,067,327 years of potential life were lost due to alcohol related chronic disease and injuries according to the CDC. What if there was a simple way to reduce the wasted suffering and unnecessary deaths? What if an identified drug or alcohol abuser admitted to the hospital for a related issue didn't have to be like the other 40% that are readmitted and the other 20% that needlessly die? Highly awarded Larry Gentilello, MD and on the Board of Directors of the American Board of Addiction Medicine will illuminate the proven practice of the Screening, Brief Intervention and Referral to Treatment Protocol (SBIRT). Shown to reduce subsequent alcohol intake and decrease the rate of trauma recidivism, SBIRT takes advantage of a patient's focus on his/her health during hospital visits, emergency room visits or any medical appointments as a unique opportunity to initiate treatment. The presentation unpacks irrefutable research that proves SBIRT screening is a cost-effective solution to reduce the frequency and severity of medical visits for the drug or alcohol user. SBIRT is a long term potential shining solution for health and safety and demonstrates that "Medicalizing" substance use problems has the potential to be one of the most important advances in medicine and public health. With the previously documented multi-faceted success of SBIRT and the immeasurable knowledge of Gentilello, this presentation is not to be missed.

Larry Gentilello M.D., F.A.C.S.: Dr. Gentilello attended Albert Einstein School of Medicine (1982), and completed a residency in general surgery at the University of Texas School of Medicine in Houston. He also completed a fellowship in surgical critical care at the University of Texas, and a fellowship in trauma surgery at the University of Miami. Dr. Gentilello joined the faculty of the University of Washington School of Medicine in 1990, where his research focused on injury prevention and public health. He has been supported by continuous external funding from federal and other agencies since shortly after completion of his training, including the National Institute of Health, National Highway Traffic Safety Administration (NHTSA), Health Resources Safety Administration, and the Robert Wood Johnson Foundation. Dr. Gentilello has an appointment as Professor of Surgery, and Adjunct Professor of Management, Policy and Community Health at the University of Texas. He has served on multiple federal policy panels, including the Center for Disease Control, National Institute of Health, National Highway Traffic Safety Administration, Center for Substance Abuse Treatment, Office of National Drug Control Policy and others. Dr. Gentilello has published over 200 peer-reviewed articles, textbook chapters, abstracts, and monographs. In recognition of his research and policy work on alcohol and injury, Dr. Gentilello received an Innovators Award from the Robert Wood Johnson Foundation, an award for Expanding the Frontiers of the Field of Addiction Medicine through Research and Innovation from the American Society of Addiction Medicine. He is also on the Board of Directors of the American Board of Addiction Medicine.

4:00-5:00

THE TREATMENT OF MENTAL HEALTH AND SUBSTANCE ABUSE: A CROSS DISCIPLINARY DISCUSSION*David Brushwood, R.Ph, J.D.**Dr. Gary Fisher, Ph.D.**Larry Gentilello M.D., F.A.C.S.**David R Hadlock, D.O., F.A.C.O.O.G., D.A.B.A.M., C.M.R.O., C.C.H.P., S.A.P., M.A.C.**Bert Toews, M.D., FASAM*

The dangers of unhealthy substance use patterns are well documented. Substance use doesn't need to be addictive to cause accidents that appear in the emergency room or to create an environment where Fetal Alcohol Spectrum Disorder might express itself. In fact, those predisposed to addiction can actually be harmed by well-meaning healthcare practitioners not aware of clues available from patient's substance use profile. Now, as never before, the need to address substance use patterns in those we treat is of paramount importance. In this session, join a talented cross-disciplinary panel of substance abuse treatment professionals as they share their experiences in identifying and treating unhealthy patterns of substance use. With the potential of social stigma associated with substance use, healthcare professionals face ethical considerations like establishing appropriate boundaries, roles and confidentiality which are complicated by Wyoming's frontier nature. How do physicians in small rural towns encourage their patients to honestly share intimate information when patients will possibly see their physician at the grocery store or in social settings? Join the discussion in this live, two-way conversation which is sure to be thought provoking and enlightening.

8:00-9:00

ISSUES IN ETHICS FOR MENTAL HEALTH AND SUBSTANCE ABUSE TREATMENT PROVIDERS*Dr. Gary Fisher, Ph.D.*

Today, more than ever, professionals treating mental health and substance abuse face situations that raise questions of ethical boundaries. These complications are compounded by Wyoming's frontier nature. Wyoming clinicians often face boundary, role and confidentiality issues because the population in their area is small, and they are forced to interact on either a social or a business basis with the clients they treat. Dr. Gary Fisher, Founder and first Director of the Center for Application of Substance Abuse Technologies, will discuss these and in addition to other ethical issues. Join Dr. Fisher as he reviews the most frequently occurring ethical dilemmas for mental health and substance abuse treatment providers such as sexual contact between therapists and clients, dual relationships and confidentiality. He will examine the ethical guidelines for mental health and substance abuse treatment providers such as National Association of Alcoholism and Drug Abuse Counselors, American Counseling Association, American Association of Marriage and Family Therapists, and the National Association of Social Workers. Learn appropriate ethical responses to navigate the challenging and complex topics of boundary issues, dual relationships, confidentiality, transference, counter transference, and termination. Dr. Fisher will unpack tricky topics surrounding appropriate and inappropriate touch such as hand holding, hugs, and non-sexual kissing. During this session, he will help professionals develop successful strategies to work with potentially dangerous or violent clients. Finally, Dr. Fisher will probe the ethical implication of modern technology such as social media and texting. This presentation will provide the most up-to-date information on multi-faceted and sensitive ethical issues.

Dr. Gary Fisher, Ph.D.: Dr. Fisher is the Founder, first Director, and current Professor for the Center for the Application of Substance Abuse Technologies at the University of Nevada, Reno. He was the first Director of the Mountain West Addiction Technology Transfer Center and the Western Region Center for the Application of Prevention Technologies. In addition to numerous scholarly articles, Dr. Fisher is the author of seven books and the senior editor of the Encyclopedia of Substance Abuse Prevention, Treatment and Recovery. His textbook, *Substance Abuse: Information for School Counselors, Social Workers and Therapists*, is in its fifth edition. Dr. Fisher's most recent book, *Understanding Why Addicts are Not All Alike: Recognizing the Types and How Their Differences Affect Intervention and Treatment*, was published in 2011. After receiving a master's degree in 1974, Dr. Fisher began his professional career as a school psychologist in the Seattle area. He received his Ph.D. in Applied Educational Psychology from the University of Washington in 1982 and accepted a teaching position in 1983 at the University of Nevada, Reno. He is also a licensed psychologist in Nevada.

9:15-12:15

FETAL ALCOHOL SPECTRUM DISORDER

David R Hadlock, D.O., F.A.C.O.O.G., D.A.B.A.M., C.M.R.O., C.C.H.P., S.A.P., M.A.C.:

For the past 15 years, the CDC statistics consistently demonstrate that one in eight pregnant women consume alcohol during pregnancy. With nearly 50% of US women's pregnancies being unplanned according to the CDC, alcohol consumption is of paramount importance to all women of childbearing age. In Wyoming alone during 2008, the weighted estimate prevalence of alcohol use among child-bearing age women was a whopping 49.1%. Often times, children born of mothers who used alcohol during pregnancy are tragically afflicted with Fetal Alcohol Spectrum Disorder (FASD). In this three hour session, the enormously

experienced and deeply devoted Dr. David Hadlock will unpack the important terminology, the characteristics, and the impacts of FASD as well as stigma responses and procedures important in preventing FASD. Included will be the significance of knowing the substance use profile of all women of reproductive age. Counselors, social workers, doctors and nurses alike will benefit from learning more about these crucial interventions that help ensure the healthy beginning of new lives everywhere.

David R Hadlock, D.O., F.A.C.O.O.G., D.A.B.A.M., C.M.R.O., C.C.H.P., S.A.P., M.A.C.: Dr. David Hadlock attended medical school in Iowa, and later completed a residency in Obstetrics and Gynecologic Surgery at the University of Medicine and Dentistry of New Jersey. Next, he completed a fellowship in Gynecologic Reproductive Surgery and Infertility at Women's Hospital of Texas. He returned to Idaho to enter into practice, and when he returned, he found a large number of patients dealing with methamphetamine addictions while pregnant. He began taking CADC classes to better understand the necessary treatments and then became a Certified Medical Review Officer to better understand the drug testing we all use. He worked in the Idaho State Department of Corrections and became a Certified Corrections Health Professional. He began working for several different treatment agencies as a counselor while completing his Substance Abuse Professional and then a Master of Addiction Counseling through NAADAC. In December of 2010, he became a board certified Addictionist. He is still in private practice in Twin Falls, Idaho doing gynecology, reproductive endocrinology and addiction medicine. Dr. Hadlock is very involved in medical assisted recovery, outpatient office detoxification, clinical supervision, medical directorship for mental health and substance abuse treatment facilities, and private practice.

1:45-3:15

TREATING THE UNIQUE NEEDS OF WYOMING VETERANS*Mark Mann, M.D.*

As our veterans return home, they need our help now more than ever according to many recent studies. A Rand Corporation report in 2009 found that as many as 20 percent of Iraq and Afghanistan veterans exhibited symptoms of Post Traumatic Stress Disorder (PTSD) or depression. The VA estimates that in 2005, the suicide rate per 100,000 veterans among men ages 18-29 was 44.99 but jumped to an astonishing 56.77 in just two years. Furthermore, while prescription drug abuse doubled among U.S. military personnel from 2002-2005 it almost tripled during 2005-2008. In consistent defense against these devastating problems is the Veterans Administration. In this increasingly relevant session, join the impressively qualified Dr. Mark Mann as he highlights the unique mental health and substance abuse challenges that face our returning veterans today. He will explain the leading role taken by the Veterans Administration in identifying and treating this heroic population. Dr. Mann will discuss approaches utilized by the Veterans Administration like Acceptance Commitment Therapy (ACT) and Cognitive Behavioral Therapy (CBT) in the treatment of mood disorders as well as additional evidence based therapies such as Cognitive Processing Therapy (CPT) and Prolonged Exposure Therapy (PE) in the treatment of PTSD. The Seeking Safety approach to treating comorbid substance abuse and PTSD will be reviewed as well as the use of safety contracts in treating suicide in the veteran population. Dr. Mann will demonstrate how every treatment professional can take advantage of these life-saving services for the veterans they serve by accessing VA services through the VA's extensive telehealth network. This session is vital to providing up-to-date and life changing and saving information to help all treatment professionals care for those who have valiantly served our country.

Mark Mann, M.D.: Dr. Mark Mann is currently the Associate Chief of Staff for Mental Health at the Sheridan VA Medical Center. The Sheridan VAMC Mental Health Department is responsible for 135 inpatient beds that range from a locked Acute Psychiatric Unit to Residential Substance Dependence and Post-Traumatic Stress Disorder Treatment. He obtained his Ph.D. in Clinical Community Psychology from the University of Maryland. He has over 10 years experience teaching psychology at the University level and has published multiple peer review journals articles and book chapters. He completed five years of neuropsychological assessment at the National Institute of Health and has worked on research projects with the National Institute of Justice, the Maryland Department of Corrections, the University of Maryland, and the Baltimore VAMC. He was a consultant for the Clinical Trials Unit of the National Institute of Drug Abuse and the University of Maryland College Park. Dr. Mann is considered an expert in the study and treatment of both Substance Abuse Disorders and Post-Traumatic Stress Disorder.
